<b>REAL RISK OF SIGNIFICANT HARM ANALYSIS</b>	
<p><b>Harm</b> Some damage or detriment or injury that could be caused to affected individuals as a result of the incident. The harm must also be “significant.” It must be important, meaningful, and with non-trivial consequences or effects.</p>	<p>The Organization did not report the possible harm(s) that might result from this breach but its notification to affected individuals advised them to “...exercise caution in the future when opening email links or attachments from unknown senders”.</p> <p>In my view, a reasonable person would consider that the contact information, and particularly email address, could be used for phishing purposes, increasing vulnerability to identity theft and fraud. These are significant harms.</p>
<p><b>Real Risk</b> The likelihood that the significant harm will result must be more than mere speculation or conjecture. There must be a cause and effect relationship between the incident and the possible harm.</p>	<p>The Organization did not provide its assessment of the likelihood of harm resulting from this incident.</p> <p>In my view, a reasonable person would consider that the likelihood of harm resulting in this case is increased because the incident appears to be the result of malicious intent (exploited credentials). The Organization did not report how long the information was exposed before the compromise was discovered.</p>
